

**Amendments To The Claims**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

Claims 1-14. (Cancelled)

15. (New) Mounting hardware for a tall-cabinet pull out, comprising:

a rigid frame (1) having an upper segment and a lower segment (10);

an upper rail (3) and a lower rail (2);

wherein a furniture front (5) is fixed on the rigid frame (1);

wherein the upper segment of the rigid frame (1) is engaged to the upper rail (3) and the lower segment of the rigid frame (1) is engaged on the lower rail (2);

wherein the rigid frame (1) is adjustable vertically between the upper rail (3) and the lower rail (2) by two height adjustment screws engaged between the lower frame segment (10) and the lower rail (2); and

wherein the rigid frame (1) is locked between the upper rail (3) and the lower rail (2) by a locking latch (11) which is spring biased and slidably engaged against the screws in the lower frame segment (10) when in the locked condition.

16. (New) The mounting hardware for a tall-cabinet pull out according to claim 15, wherein the two height adjustment screws are screwed into the lower rail and each have a head (24) which extends through bottom and top sides of the lower rail and a support surface (13) of the two height adjustment screws engages under the bottom side of the lower rail, and

wherein the spring biased locking latch engages a recess between each of the heads and the bottom side of the lower rail when in the locked condition.

17. (New) The mounting hardware for a tall-cabinet pull out according to claim 16, wherein the heads can be turned in the lower rail to vertically adjust the frame between the upper rail and the lower rail.

18. (New) The mounting hardware according to claim 15, wherein the locking latch (11) in the lower frame segment (10) is formed sufficiently long so as to be spring biased to protrude in the locked condition out from the lower frame segment (10) and be pushed against a spring that is supported in the lower frame segment (10) to unlock the rigid frame from between the upper and lower rails (2, 3).

19. (New) The mounting hardware according to claim 15, wherein a first bolt (14) and a second bolt (14) are fixed on upper rail (3) and a snap lock (7) and a guide block (6) are fixed on the upper segment of the rigid frame;

wherein the first bolt (14) is engaged in the snap lock (7) and the second bolt (14) is engaged in the guide block (6) when the rigid frame is engaged to the upper rail (3).

20. (New) The mounting hardware according to claim 19, wherein the first bolt (14) is slid through a slit in the guide block (6) and into a slit in the snap lock (7) and the second bolt is slid into a slit in the guide block to engage the first bolt in the snap lock and the second bolt in the guide block.

21. (New) The mounting hardware according to claim 20, wherein the second bolt (14) slides into the slit in the guide block and the snap lock (7) hooks around the first bolt (14) when the upper segment of the rigid frame is engaged to the upper rail.

22. (New) The mounting hardware according to claim 15, wherein the furniture front (5) is fixed on a front segment of the frame (1) by two vertical spaced adjustment straps (8) that are affixed horizontally on the furniture front (5), and two adjustment blocks (9) that are respectively screwed to the frame within a recess in each of the straps.

23. (New) The mounting hardware according to claim 22, wherein elongated holes (19) are provided in the adjustment straps to permit horizontal adjustment and vertical positioning of lateral edges of the furniture front (5) by fastening screws (17).

24. (New) The mounting hardware according to claim 23, wherein the fastening screws (17) are screwed into the adjustment blocks (9), wherein a space between the respective adjustment strap (8) and adjustment block (9) are adjusted by changing the height of the heads of adjustment screws (18), which are disposed in the adjustment block and push against the adjustment straps.

25. (New) The mounting hardware according to claim 24, wherein the furniture front (5) is additionally attached by means of screws in elongated holes (22) on the frame (1).

26. (New) The mounting hardware according to claim 15, integrated in the lower telescopic (2), which is held with a front and a rear metal support plate (25), is a buffer (27) with a limit stop (26).

27. (New) The mounting hardware according to claim 26, wherein the buffer (27) is snapped into the lower telescopic rail (2) by means of a holder (29) at a bolt (31).

28. (New) The mounting hardware according to claim 27, wherein the bolt (31) is formed by a nut on one of the two height adjustment screws (4).

29. (New) The mounting hardware according to claim 26, wherein the limit stop (26) for the buffer is formed by a folded-up angle in the rear metal support plate (25).

30. (New) The mounting hardware according to claim 26, wherein the buffer (27) is a pneumatic buffer with a reset spring.
